

Course Title: Teaching with the Brain in Mind

Course Credit: 1

Course Description:

This course offers an introduction to the latest research and best practices of applying brain research in real classrooms. Participants study the theory behind brain research and apply it effectively in their classrooms. The human brain is an amazing structure - a universe of infinite possibilities and mystery. Recent developments in brain research have the potential of improving teaching and learning dramatically.

Student Learning Objectives -

- Assess the attributes of brain based learning.
- Recognize the parts and functions of the brain.
- Assess methods of teaching to the whole brain.
